Hello.

Dear hiring manager,

I would like to apply for the position of Senior Software Engineer at your company. I have software design and development experience of 15+ years. I have worked in healthcare, insurance and education domains. I have been part of startup / small-medium teams throughout my career and therefore possess exposure to all stages of software development life cycle. I am passionate and sincere about my work and like to learn / try out new technologies. I have bachelors of engineering in Information Technology and masters in software engineering.

During my last job at Continuity Health, I developed an mHealth platform. I was a founding tech member of the team when the company started. I was with this company for 11 years. I laid the technical foundation for the backend, services, databases, customer portal and architected the overall system. I was a core member of business analysis, requirements gathering, specifications, processes, development, deployment, change management, support and QA activities. I successfully navigated issues that come with working in small teams and resource constraints. Another challenge, I faced, was working concurrently on multiple tasks requiring expertise in different skills which I successfully resolved by planning, documentation and prioritisation. During my tenure, I developed various clinical modules that fall under mHealth and designed it so it can be offered as a service, platform or product. I also gained valuable experience when I migrated to AWS cloud. I developed interfaces for clinical data exchange using standards such as HL7, FHIR, JSON and XML.

I am well verse with development frameworks like .NET, nodeJS, jQuery, React. I am fluent in C#, javascript, python, SQL programming languages. I have developed APIs, portals, mobile Apps, client-server, stand-alone and Alexa forms of solutions. Another strong suit of mine is understanding needs, requirements specs, prototyping, database design, creating analytics / reporting and supporting / training users. I have working knowledge of cloud platforms. ML and AI are are interests I am pursuing from personal learning angle.

Yours sincerely,

Malay Thakershi
